

Belson's Green Page

Let us guide you to a greener place

Recycle - Reduce - Reuse

Belson stocks many products that will make your business more environmentally friendly by reducing the amount of trash going to the landfill. We have many products that are manufactured using recovered items, or are designed to be recycled, composted, or manufactured to naturally degrade. We also have many waste container options to make it easy for your employees to recycle.

Let Belson explain the many ways we can make your life a little greener.

Biodegradable - Products that are made from materials that will disintegrate over time without adverse effects to soil, water, or atmosphere.

Composting - The accelerated biological decomposition of organic material in the presence of warmth, moisture, oxygen, and/or bacteria.

Green Seal Certified - Green Seal is a certification process that works with manufacturers, industry sectors, purchasing groups, and governments at all levels to "green" the production and purchasing chain.

Post Consumer Waste - Materials that have served their purpose, and then recovered before disposing in landfill.

Post Industrial Waste - Manufacturing scraps and trimmings that are reintroduced into the manufacturing process.

Renewable Source - A natural resource that is replenished by a natural means, as in plants.

Sustainability - Is the capacity of meeting the needs of the present, without compromising future generations from meeting their own needs.
